

I am J Corporation Introduces a Unified AI Platform for Global Knowledge Access

The Palo Alto artificial intelligence company connects a production multilingual consumer platform with real-world intelligence, responsible AI governance, and deployable enterprise infrastructure.

Published: August 1, 2026 **Dateline:** Palo Alto, California

PALO ALTO, Calif., August 1, 2026 — I am J Corporation today introduced its coordinated artificial intelligence platform for knowledge access, real-world intelligence, and institutional deployment. The platform brings together conversational AI, multilingual interaction, computer vision, contextual intelligence, guided navigation, responsible AI governance, and cloud-based infrastructure within a single human-centered ecosystem.

The company's current work spans a production consumer platform available through the Apple App Store and an enterprise platform under development for institutions, education, humanitarian operations, public services, and environments where conventional infrastructure may be unavailable, unreliable, or insufficient.

A coordinated platform rather than isolated AI tools

I am J is designed around the premise that artificial intelligence should operate as a trusted layer of assistance across everyday knowledge, movement, visual understanding, exploration, guided experiences, and safety. The consumer platform integrates six primary experiences: Prodigy, Pathfinder, Guided Tours, Explorer, Sight & Tell, and SOS.

These capabilities are intended to work together so that people can move naturally between asking questions, understanding their surroundings, discovering places, navigating the real world, receiving visual explanations, and accessing assistance when circumstances become urgent.

“Knowledge should not be limited by language, geography, or the availability of conventional infrastructure.”

Hernan Clarke, Founder and Chief Executive Officer, I am J Corporation

A production consumer platform with global reach

The I am J consumer platform is available through the Apple App Store in 125 countries and supports 21 languages. It combines conversational knowledge assistance with navigation, guided exploration, computer vision, local discovery, and emergency-support capabilities in one mobile experience.

The platform’s global and multilingual design reflects the company’s broader mission to make trusted knowledge more accessible across languages, devices, and real-world environments.

Enterprise and institutional deployment

I am J Corporation is also developing Spark Nexus, a deployable enterprise AI infrastructure platform intended for organizations, educational institutions, humanitarian programs, public services, and remote or infrastructure-limited environments.

The planned NOMAD and GRID deployment models are designed to support portable and permanent installations. The enterprise edition is being developed to expand language and dialect support while enabling institutions to deliver conversational access to knowledge through secure, purpose-built infrastructure.

Responsible AI and public accountability

The company’s public Innovation Center provides access to information about its technology architecture, responsible AI principles, governance approach, compliance objectives, deployment models, social-impact goals, and public technology resources.

I am J’s approach emphasizes human-centered design, multilingual access, transparency, accountable deployment, accessibility, and the protection of human dignity. The company maintains public responsible-AI and governance materials as part of its broader commitment to trusted development.

Current development priorities

The company's current priorities include:

- Continuing development of the production consumer platform and its integrated AI experiences.
- Expanding multilingual knowledge access and global availability.
- Advancing an Android edition of the consumer platform.
- Developing Spark Nexus enterprise and institutional deployment capabilities.
- Strengthening responsible AI, governance, security, and public documentation.
- Preparing education, humanitarian, and infrastructure-limited deployment models.

Knowledge Without Barriers community campaign

I am J Corporation is conducting a 90-Day Community Campaign to help accelerate multilingual AI, Android development, enterprise capabilities, education initiatives, and humanitarian deployment. The campaign supports the next phase of the company's mission while the consumer platform remains available in production.
