

I am J Expands Real-World Intelligence with Explorer and Journey Creation

The platform connects outdoor exploration, location context, trail management, route planning, and safety-oriented assistance in one AI-supported experience.

Prepared: August 2026

Dateline: Palo Alto, California

Release ID: PRESS-007

PALO ALTO, Calif. - I am J Corporation announced continued development of Explorer, its real-world intelligence and outdoor assistance experience, including trail discovery, saved trail sets, location context, safety support, and a new Journey creation workflow.

Explorer is designed to help users move from passive information consumption to active, context-aware interaction with places, routes, trails, and journeys.

From trails to journeys

The Journey workflow is being developed for users who want to define and recreate routes through geographic vertices, map interactions, and GPS coordinates.

The system is intended to support interactive map placement, route construction, saved journey data, and future AI-assisted refinement.

“Exploration becomes more useful when AI understands place, route, context, and user intent together. Explorer and Journey are designed to make that intelligence practical while keeping safety and human judgment central.”

Hernan Clarke, Founder and Chief Executive Officer, I am J Corporation

Location-aware intelligence

Explorer combines mapping, geospatial context, route information, environmental awareness, and conversational assistance.

The design goal is to help users understand where they are, what is around them, and how to navigate or explore more effectively.

Safety as part of exploration

Explorer is designed to work alongside the broader I am J safety ecosystem, including SOS and location-aware guidance.

No consumer AI service should be treated as a substitute for emergency services, professional advice, or appropriate preparation for outdoor activities.

Key points

- Trail discovery and saved trail sets.
- Interactive Journey creation.
- GPS coordinate and map-based route definition.
- Location-aware contextual assistance.
- Integration with broader safety capabilities.
